SUMMARY

Product designer with a software engineering background. I use research to understand what people are trying to do, turn that into product and interaction decisions, and carry the design into working software. Recent work includes a production food-ordering app, a solo macOS activity monitor, and a Telegram learning prototype.

SKILLS

Product design: User-centered design, user research, user interviews, contextual inquiry, research synthesis, problem framing, competitive analysis, information architecture, user flows, wireframing, UX design, UI design, interaction design, visual design, high-fidelity prototyping, usability testing, responsive and adaptive design, motion design

Tools and implementation: Figma, Flutter, Vue, FastAPI, Go, Python, PostgreSQL, Unity; mobile, desktop, web, AI-assisted development, and code-based prototypes

PRODUCT DESIGN PROJECTS

Product Designer | Observatory | Solo project

Jul 2026 - Aug 2026

Native macOS activity monitor released as version 0.1.1.

- Conducted 5 exploratory interviews and synthesized 2 working personas. The central finding was that people approached performance through an application or task, not an isolated process.
- Used that finding to make applications the main unit of the product, with repeatable test recordings, local saved results, and synchronized comparisons.
- Designed the information architecture, Figma wireframes, interface, visual identity, and motion. Wrote detailed specifications, directed AI-assisted implementation, and shipped public macOS release 0.1.1 with a launch film.

Product Designer | Two Sticks | Collaborative project

May 2024 - Jun 2024

Telegram Chinese character learning prototype based on a 2024 MPGU diploma team's research.

- Turned the diploma team's pedagogical research into one Telegram learning loop: find, save, recall, study, and handwrite a Chinese character without leaving the chat.
- Designed the information architecture, interaction, and interface, then built a working prototype across a Telegram bot, FastAPI backend, PostgreSQL data model, and Vue handwriting app with recognition scoring.

WORK EXPERIENCE

Software Developer | Paycos | Contract

Jul 2024 - Dec 2025

Payments, order processing, and digital receipt systems.

- Reduced PDF receipt processing by about 90%, from 6-10 seconds to 600-650 ms, by replacing unnecessary OCR with direct text extraction while preserving OCR for image inputs.
- Built payment and order-processing workflows across Go, PostgreSQL, Kafka, Redis, gRPC, and Protobuf, translating product rules into stateful services.

Product Designer / Mobile Engineer | PizzaSushiWok (SuperGood)

Jan 2023 - Jul 2024

Hired as a mobile engineer; role expanded into end-to-end product design ownership for a production food-ordering app.

- Proposed and delivered a single Flutter app to replace separate Android and iOS applications, designing and implementing the end-to-end order experience from menu through checkout and delivery tracking.
- Used customer conversations, contextual inquiry, competitive analysis, task tests, and polls to identify 3 recurring problems: unclear meal value, hidden delivery time and total, and friction in repeat orders.
- Shipped fuller dish details, a persistent order summary, and direct paths from favorites and order history back to the basket across adaptive mobile layouts.

Mobile Game Designer & Prototype Developer | 22bytes

Nov 2022 - Jan 2023

Short-term mobile game studio role.

- Built playable Android prototypes in short cycles with Unity and Jetpack Compose, shaping the interaction flow, player feedback, presentation, and scope for each concept.

EDUCATION

Bachelor of Computer & Information Science | Moscow Finance and Law Academy (MFUA)

2019 - 2023

LANGUAGES

Russian (native) | English (B2, upper-intermediate)
