SUMMARY

Product designer with a software engineering and independent game development background. I find the real need behind a product, then carry the experience from user research and problem framing through interaction design, visual design, prototyping, and implementation. Game design informs how I use feedback, motion, pacing, and system behavior to make products clear, engaging, and a little more joyful.

SKILLS

Product design: User-centered design, product direction, user research, user interviews, problem framing, information architecture, user flows, wireframing, UX/UI design, interaction design, visual design, high-fidelity prototyping, motion design, usability testing, adaptive design

Tools and implementation: Figma, Flutter, Godot, Unity, Vue, FastAPI, Go; mobile, desktop, web, and playable products

PRODUCT DESIGN EXPERIENCE

Independent Product Designer | Observatory

Jul 2026 - Aug 2026

- Conducted 5 exploratory user interviews and synthesized 2 working personas, revealing that people investigated the performance of an application or task, not an isolated process.
- Designed the product direction, information architecture, user flows, Figma wireframes, UX/UI, interaction design, visual identity, and motion for a native macOS activity monitor.
- Released version 0.1.1 with application-level process totals, controlled tests, and local, reopenable comparisons; directed AI-assisted implementation from authored specifications and produced the launch film.

Mobile Product Designer & Developer | PizzaSushiWok (SuperGood)

Jan 2023 - Jul 2024

- Proposed replacing separate Android and iOS apps with one Flutter product, then owned product direction, user research, information architecture, UX/UI design, and implementation through production.
- Used customer conversations, contextual inquiry, competitive analysis, prototype task tests, comparison tests, and polls to reshape menu navigation, dish details, repeat ordering, checkout, payment and 3DS, maps, courier tracking, loyalty, and promotions.
- Designed adaptive layouts and implemented the end-to-end order journey, improving usability and reliability while requirements changed.

Product Designer & Developer | Two Sticks (Chinese Bee)

2024

- Translated a 2024 MPGU diploma team's pedagogical research into a coherent Telegram learning flow across search, saved vocabulary, flashcards, character guidance, notebook sheets, handwriting practice, and OCR scoring.
- Owned product direction, information architecture, UX/UI and interaction design, then built the bot, FastAPI backend, data model, and Vue web app into a shipped prototype.

GAME DESIGN EXPERIENCE

Mobile Game Designer & Prototype Developer | Short-term studio

Nov 2022 - Jan 2023

- Turned mobile game concepts into playable Android prototypes in short cycles using Unity and Jetpack Compose, owning player experience, interaction flow, feedback, presentation, and scope.

Independent Game Designer & Developer | Self-directed projects

2019 - Present

- Designed and shipped 2D and 3D Godot games, combining mechanics, progression, difficulty, feedback, visual art, animation, sound, and stateful systems into complete player experiences.
- Iterated Santa Foundation after external player feedback by changing hazard visibility, movement, spawning, timing, and difficulty; built Discourses by Campfire's environment, data-driven systems, 3D art, music, and sound.

SOFTWARE ENGINEERING EXPERIENCE

Software Developer | Paycos, contract

Jul 2024 - Dec 2025

- Developed payment, order-processing, and digital-receipt workflows in Go across PostgreSQL, Kafka, Redis, gRPC, and Protobuf, translating complex product rules into stateful systems.

EDUCATION AND LANGUAGES

Bachelor of Computer & Information Science | Moscow Finance and Law Academy (MFUA) | 2019 - 2023

English: B2
