

IGOR KUPCHINENKO

PRODUCT DESIGNER

i.kupchinenko@gmail.com | kidpudel.github.io/personal-website
linkedin.com/in/iggydev | github.com/KidPudel

Product designer who researches, designs and ships. Software-engineering background: I prototype in code and direct AI coding agents to turn my specifications into working products. Shipped a Flutter ordering app on iOS and Android, released a macOS app, and coded an Instagram Saves concept from eight interviews.

RELEVANT DESIGN EXPERIENCE

PizzaSushiWok (SuperGood)

Product Designer / Mobile Engineer | Jan 2023 - Jul 2024

- Designed and built the food-ordering app, from menu and basket through payment and delivery tracking: one Flutter app replacing separate Android and iOS apps, with no design-to-code handoff.
- Customer conversations and ordering tasks highlighted uncertainty about dish details, delivery time and total cost. Added fuller dish information and a persistent order summary.
- Made previous orders reusable: users could add individual dishes or the whole order back to the basket. Added access through favourites and adapted layouts for different mobile screens.
- Built the app theme on Material Design with custom components bound to it, including a menu whose category tabs and dish list scroll in sync, with animated transitions.

SELECTED PROJECTS

Instagram Saves redesign

Independent concept, coded prototype | 2026

- Interviewed eight people about saving and finding posts. Turned the recurring problems into collection suggestions, search and date filters, notes, pins and shared reactions.
- Built the prototype in code (React): an interactive app running live on my site, plus walkthrough films in Remotion. Explored surfacing saved collections in the main feed.

Observatory

Personal project, released on GitHub | Jul 2026 - Aug 2026

- Five exploratory interviews shaped an app-first view of Mac performance for developers and power users: processes grouped into application totals, with detail one level below.
- Designed the interface and saved-recording comparisons, wrote the specifications and directed AI coding agents through the SwiftUI build. Released 0.1.1 with identity, artwork and launch film.

Two Sticks

Collaborative prototype | May 2024 - Jun 2024

- Turned a diploma team's pedagogical research into a Telegram flow for finding, saving and practising Chinese characters. Designed and built the bot and handwriting web app; no longer hosted.

ADDITIONAL EXPERIENCE

Paycos

Software Developer, contract | Jul 2024 - Dec 2025

- Built payment and order-processing services. Cut PDF receipt processing from 6-10 s to 650 ms by extracting text directly, keeping OCR for images.

22bytes

Mobile Game Designer / Prototype Developer | Nov 2022 - Jan 2023

- Built playable Android prototypes in short cycles, shaping interaction flows, player feedback and scope.

SKILLS

Design: user interviews, synthesis, flows, interaction and visual design, motion, prototyping, usability testing. Figma, Material Design.

Code: HTML, CSS, JavaScript, React and Flutter prototypes; a SwiftUI app shipped by directing AI coding agents (Claude Code, Codex); Go, Python; Unity, Godot, raylib, OpenGL.

Portfolio site built by me in Astro and React, including the embedded interactive Instagram prototype.

EDUCATION AND LANGUAGES

Bachelor of Computer & Information Science, Moscow Finance and Law Academy (MFUA) | 2019 - 2023

Russian: native | English: B2 (upper-intermediate)
