

IGOR KUPCHINENKO

PRODUCT DESIGNER • CONSUMER APPS • RESEARCH AND INTERACTION DESIGN

Portfolio: kidpudel.github.io/personal-website | i.kupchinenko@gmail.com

Moscow · office, hybrid or remote | linkedin.com/in/iggydev | github.com/KidPudel

Product designer for consumer apps with a software-engineering background. I start with interviews and observation, then design flows that make time, cost and the next step clear. At SuperGood I redesigned ordering and rebuilt the app alone: repeating a usual order fell from about a minute to 5 seconds, and the store rating rose from 3.1 to 3.7.

PRODUCT DESIGN EXPERIENCE

PizzaSushiWok (SuperGood)

Product Designer / Mobile Engineer, sole designer and engineer, food delivery | Aug 2023 - Jul 2024

- Reviews doubted the app and whether the food was worth its price. I owned ordering end to end, working directly with the business. Review analysis and observation showed hidden time and total, people losing their place in the menu, and usual orders rebuilt dish by dish.
- Added a pinned bar with delivery time, item count and total, weight, ingredients and nutrition on every dish, and reordering from history: one tap brings back a past order or a single dish.
- Rebuilt separate iOS and Android apps as one Flutter app in 11 months, with no handoff: menu, basket, payment with 3DS, maps and tracking, loyalty.
- Comparative usability test with 10 colleagues: reordering took 5 s instead of 60 s, success rose from 2 to 10 of 10, ease from 3 to 6 of 7. The store rating rose from 3.1 to 3.7; new reviews praised the app.

SELECTED PROJECTS

Observatory

Personal macOS app, built with AI coding agents from my specs, released on GitHub | Jul - Aug 2026

- Five interviews defined two needs: see a whole app at once, and record runs to compare. Grouped processes by app, so Brave Browser reads as one row instead of 17.
- Iterated the prototype into a scannable list with app-first tests. Three developer colleagues have used it for two months to compare app versions.

Instagram Saves redesign

Independent concept, coded prototype | 2026

- Eight interviews: six said finding a saved post was their main problem, so search came first.
- Designed AI search by subject, place or note, and suggestions that make saving to a new collection one tap. Interactive React prototype, live on my site.

Two Sticks

Telegram product for learning Chinese, built on a university diploma's research | 2024

- One chat for search, flashcards and handwriting instead of three tools; designed and built the bot, API and Web App. Students missed pronunciation practice, the next step.

OTHER EXPERIENCE

Paycos | Software Developer, contract | Jul 2024 - Dec 2025

- Built payment and order-processing services. Cut PDF receipt processing from 6-10 s to 650 ms by extracting text directly, keeping OCR for images.

22bytes | Mobile Game Designer / Prototype Developer | Apr 2023 - Aug 2023

- Designed and built playable Android game prototypes in short cycles: interaction, player feedback, scope.

SKILLS

Research: user interviews, customer development, contextual inquiry, comparative usability testing, review analysis, synthesis, competitor analysis, CJM, JTBD.

Design: UX/UI, information architecture, user flows, wireframes, interaction design, prototyping, design systems, adaptive layouts, motion. Figma, Material Design, Apple HIG.

AI: designing AI-assisted features (suggestions, semantic search, error states); building with AI coding agents (Claude Code, Codex).

Code: React, Flutter, HTML/CSS/JS, SwiftUI; Go, Python.

EDUCATION AND LANGUAGES

Programming in Computer Systems, MFUA College | 2019 - 2023 · Russian native, English B2
