

IGOR KUPCHINENKO

PRODUCT DESIGNER

i.kupchinenko@gmail.com | linkedin.com/in/iggydev | github.com/KidPudel | kidpudel.github.io/personal-website

PROFESSIONAL SUMMARY

I design products from what a person should be able to do, then shape the interface and the systems that make the experience real. The strongest evidence is Observatory, a native macOS activity monitor taken from research through a working release and launch film; a production food-ordering product; an independent learning product; and games shaped through player feedback.

CORE CAPABILITIES

Experience and product design: product direction, information architecture, user flows, visual identity, motion, adaptive interfaces, and usability iteration

Behavior and systems: state, rules, workflows, feedback over time, and the boundary between interface and product logic

Prototyping: sketches, wireframes, motion, Figma, Flutter, and playable builds

Product judgment: clarifying the real need, iterating with evidence, and designing within what can actually be built

RELEVANT PRODUCT EXPERIENCE

Product Designer | Observatory, independent macOS product

Jul 2026 - Aug 2026

research, UX/UI, visual identity, launch film | [Case study](#)

- Designed a native macOS activity monitor that groups related processes into application totals, records controlled tests, and keeps results local, reopenable, and comparable.
- Ran 5 exploratory interviews and used two working personas to decide what to show first: a readable whole application, with process detail and comparable recordings available when needed.
- Designed the information architecture, user flows, UX/UI, visual identity, and launch film, iterating from sketches and an early prototype through wireframes, including folding History into Tests as Saved Results.

Mobile Product Designer & Developer | PizzaSushiWok

Jan 2023 - Jul 2024

ordering workflows, payments, maps, adaptive layouts

- Proposed consolidating separate Android and iOS applications into one Flutter product and carried it from an incomplete need through production readiness.
- Designed and implemented the ordering journey across menu navigation, basket and checkout, payment and 3DS, maps and addresses, courier status, promotions, loyalty, bonuses, and themes.
- Created adaptive layouts and custom menu-scrolling behavior, then improved usability, performance, reliability, and presentation quality under changing requirements.

Product Designer & Developer | Chinese Bee, independent learning product

Completed

learning workflow, handwriting practice, quizzes, recognition feedback

- Designed a coherent learning workflow across multilingual character search, word details, saved vocabulary, quizzes, guidance, handwriting practice, and recognition feedback.
- Connected chat, saved learning state, practice eligibility, freehand input, and accuracy feedback into one useful capability rather than a collection of disconnected features.

RELEVANT PRODUCT EXPERIENCE (CONTINUED)

Mobile Game Designer & Prototype Developer | Short-term studio engagement

Nov 2022 - Jan 2023

Unity, Android Jetpack Compose, rapid mobile-game prototyping

- Turned small mobile-game concepts into playable Android prototypes in short iteration cycles using Unity and Jetpack Compose.
- Owned each prototype's player experience, flow, feedback, and presentation from concept through playable build.
- Made scope and implementation trade-offs that kept each small-scope prototype focused on a clear, testable core experience.

ADDITIONAL PROFESSIONAL EXPERIENCE

Developer | Paycos, contract

Jul 2024 - Dec 2025

- Owned product behavior for order-processing, payment-gateway, and receipt workflows.
- Reduced PDF receipt processing from 6-10 seconds to about 600ms, and mentored two developers.

ADDITIONAL DESIGN EVIDENCE

Game Projects | Independent work

Recent

Godot, 2D and 3D experiences, mechanic design, stateful behavior, player feedback

- Designed mechanics, progression, environmental behavior, difficulty, and feedback across completed games, then changed visibility, movement, spawning, timing, and builds after external play.
- Created practical pixel art, Blender models, animation, music, and sound when those disciplines were needed to test the complete experience.

ADDITIONAL VALUE

- Self-directed product and game work since 2019 across mobile, web, and playable experiences.
- Six months tutoring programming and computer-science fundamentals, plus professional developer onboarding and mentoring.

EDUCATION AND LANGUAGES

Bachelor of Computer & Information Science | Moscow Finance and Law Academy (MFUA) | 2019 - 2023

English: B2
