

IGOR KUPCHINENKO

PRODUCT DESIGNER

i.kupchinenko@gmail.com | kidpudel.github.io/personal-website
linkedin.com/in/iggydev | github.com/KidPudel

Product designer with a software-engineering background. At SuperGood, my role expanded from mobile development into designing the ordering experience. I designed and built the app released on iOS and Android. My independent work includes a released macOS app and a redesign concept informed by user interviews.

RELEVANT DESIGN EXPERIENCE

PizzaSushiWok (SuperGood)

Product Designer / Mobile Engineer | Jan 2023 - Jul 2024

- Designed and shipped the food-ordering app, from menu and basket through payment and delivery tracking. Built one Flutter app to replace separate Android and iOS applications.
- Customer conversations and ordering tasks highlighted uncertainty about dish details, delivery time and total cost. Added fuller dish information and a persistent order summary.
- Made previous orders reusable: users could add individual dishes or the whole order back to the basket. Added access through favourites and adapted layouts for different mobile screens.

SELECTED PROJECTS

Instagram Saves redesign

Independent concept | 2026

- Spoke with eight people about saving and finding posts. Used the recurring problems to shape collection suggestions, search and date filters, notes and pins.
- Built an interactive prototype of the proposed flows and explored bringing saved collections into the main feed to help people revisit them.

Observatory

Personal project | Jul 2026 - Aug 2026

- Five exploratory interviews informed an app-first view of Mac performance. Grouped related processes so users could read application totals before opening details.
- Designed the interface and saved-recording comparisons, directed AI-assisted implementation, and released the macOS app with a launch film.

Two Sticks

Collaborative prototype | May 2024 - Jun 2024

- Turned a diploma team's pedagogical research into a Telegram flow for finding, saving and practising Chinese characters. Designed and built the bot and handwriting web app; the prototype is no longer hosted.

ADDITIONAL EXPERIENCE

Paycos

Software Developer, contract | Jul 2024 - Dec 2025

- Built payment and order-processing services. Cut PDF receipt processing from 6-10 seconds to 600-650 ms by extracting text directly and retaining OCR for image inputs.

22bytes

Mobile Game Designer / Prototype Developer | Nov 2022 - Jan 2023

- Built playable Android prototypes in short cycles, shaping interaction flows, player feedback and scope.

SKILLS

User interviews, research synthesis, user flows, interaction and visual design, prototyping, usability testing, responsive layouts and motion. Figma; code prototypes with Flutter and Vue; software development with Go, Python and Unity.

EDUCATION AND LANGUAGES

Bachelor of Computer & Information Science | 2019 - 2023

Moscow Finance and Law Academy (MFUA)

Russian: native | English: B2 (upper-intermediate)
