

IGOR KUPCHINENKO

PRODUCT DESIGNER • CONSUMER APPS • RESEARCH AND INTERACTION DESIGN

Portfolio: kidpudel.github.io/personal-website | i.kupchinenko@gmail.com

Moscow • office, hybrid or remote | linkedin.com/in/iggydev | github.com/KidPudel

Product designer for consumer apps. I start with interviews and watching people use a product, then design the flows and information that show them what is happening, what comes next and what it costs. Shipped a food-ordering app on iOS and Android; since then, research-led projects built as working prototypes. A software-engineering background lets me test ideas in code, not only in Figma.

PRODUCT DESIGN EXPERIENCE

PizzaSushiWok (SuperGood)

Product Designer / Mobile Engineer, food delivery app | Aug 2023 - Jul 2024

- Public reviews questioned both the app and whether the food was worth the price. Customer conversations, observed orders and prototype tasks showed people could not judge a dish, delivery time or total before paying.
- Added weight, ingredients, nutrition and cooking time to the dish sheet, and a persistent bar with delivery time, item count and total. Brought address, time, payment, bonuses and total into one checkout, each editable in place.
- Weekday orders often repeated, so I turned order history into reordering: add single dishes or a whole past order back to the basket.
- Designed and built the app in Flutter, replacing separate iOS and Android apps with no handoff: menu, basket, payment and 3DS, maps and tracking, loyalty, on a design system of Material Design components. Shipped on both platforms.

SELECTED PROJECTS

Instagram Saves redesign

Independent concept, coded prototype | 2026

- Interviewed eight people about saving and finding posts. Synthesis showed the work of organising was left to their future selves: too much to file, too little to remember, too easy to leave.
- Designed collection suggestions that shorten filing without removing choice, search by subject, place or note, date filters, pins, and collections as a feed for saves nobody revisits. Built as an interactive React prototype, live on my site.

Observatory

Personal macOS app, built with AI coding agents from my specs, released on GitHub | Jul 2026 - Aug 2026

- Five interviews about recent performance checks defined two needs: see a whole application at once, and keep a recording to compare later. Grouped processes under their application, with detail one level below.
- Reviewed the first prototype against those tasks and made three changes: cards became a scannable list with a live plot, test setup starts from the app, saved results moved into the recording flow.

OTHER EXPERIENCE

Paycos

Software Developer, contract | Jul 2024 - Dec 2025

- Built payment and order-processing services. Cut PDF receipt processing from 6-10 s to 650 ms by extracting text directly, keeping OCR for images.

22bytes

Mobile Game Designer / Prototype Developer | Apr 2023 - Aug 2023

- Designed and built playable Android game prototypes in short cycles: interaction, player feedback, scope.

SKILLS

Research: user interviews, customer development, usability testing, observation, synthesis, competitor analysis, CJM, JTBD, hypothesis framing.

Design: UX/UI, information architecture, user flows, wireframes, interaction design, prototyping, design systems, adaptive layouts, motion. Figma, Material Design, Apple HIG.

Code: React, Flutter, HTML/CSS/JS; SwiftUI via AI coding agents (Claude Code, Codex); Go, Python.

EDUCATION AND LANGUAGES

Diploma in Programming in Computer Systems, MFUA College | 2019 - 2023

Russian: native | English: B2 (upper-intermediate)
