Junior product designer for consumer apps, with a background in software engineering and game design. I find where products don't fit how people actually behave, through interviews and observation, and design interactions around how people think. I build what I design: alone in Flutter at SuperGood, where reordering a usual meal fell from about a minute to 5 seconds and the store rating rose from 3.1 to 3.7, and with Claude Code, Codex and ChatGPT for my 2026 projects.

EXPERIENCE

PizzaSushiWok (SuperGood)

Product Designer / Mobile Engineer, food delivery app | Aug 2023 - Jul 2024

- The only designer and engineer, working directly with business stakeholders. Analysed about **150 reviews** and watched **10 people** order at work to see where they hesitated.
- Cut reordering a usual meal from **60 s to 5 s** with one-tap repeats from order history. In a usability test with 10 colleagues, success rose from **2 to 10 of 10** and ease from **3 to 6 of 7**.
- Made time and cost visible before paying: a pinned bar with delivery time and total, and weight, ingredients and nutrition on every dish.
- Designed every screen in Figma (components, variables, auto layout) on my own design system with light and dark themes, then rebuilt iOS and Android as **one Flutter app** in 11 months. Store rating rose from **3.1 to 3.7**.

22bytes

Game Designer / Prototype Developer, casual and hyper-casual mobile games | Apr 2023 - Aug 2023

- Designed core loops for **7 small games** (puzzles, light strategy, short RPGs): fast nested loops inside longer ones, and chains that unlock step by step.
- Playtested every build: 2-5 minute sessions, day-1 retention **27-30%**, day-7 **4-10%**. **2 of 7** were greenlit.

SELECTED PROJECTS

Instagram Saves redesign

Independent concept, designed in Figma, prototype built with Claude Code | 2026

- Nine interviews and a journey map: **6 of 9** couldn't find a specific save, and **7 of 9** moved what mattered to Notes, Notion or Maps. So search in Saved came before more filing.
- Finding a half-remembered post took **about 10 s instead of 90** in a timed test with 3 people. Collection suggestions make a new collection **1 tap instead of 2 and a name**.

Observatory

Personal macOS app, designed in Figma, built with Codex and ChatGPT from my specs, released on GitHub | Jul - Aug 2026

- **5 interviews**: people started from an app, never a process, so processes group under their app. Brave Browser reads as **1 row, not 17**.
- Cut top-level sections from **3 to 2** by putting results where a test ends. **3 developer colleagues** have used it for two months. Also made its identity, artwork and launch film.

Two Sticks

Telegram product for learning Chinese, built on a university diploma's research | 2024

- Chose Telegram over a new app, so there's **nothing to install**, with handwriting as a Telegram Web App. Designed and built the bot, API and Web App.
- One saved word list feeds flashcards, notebook sheets and handwriting. Shipped the learner loop before the teacher tools in the brief; students missed pronunciation practice, the next step.

This portfolio

Designed, drawn and art-directed by me, built with Claude Code in Astro | 2026

- Each work card acts out its project's main decision in the real interface. Every drawing on the site is mine.

OTHER EXPERIENCE

Paycos | Software Developer, contract | Jul 2024 - Dec 2025

- Built payment and order services; cut PDF receipt processing from **6-10 s to 650 ms**.

SKILLS

Research: user interviews, customer development, contextual inquiry, comparative usability testing, review analysis, playtesting, job stories (JTBD), customer journey maps, competitor analysis.
Design: UX/UI, interaction design, information architecture, user flows, wireframes, prototyping, visual design, design systems, mobile (iOS, Android), motion, identity, illustration. Figma, FigJam, Material Design, Apple HIG.
AI and code: designing AI features (semantic search, AI suggestions); building with Claude Code, Codex and ChatGPT from my own specs; Flutter, React, SwiftUI, HTML/CSS/JS.

EDUCATION AND LANGUAGES

Programming in Computer Systems, MFUA College | 2019 - 2023 · Russian native, English B2
